

Ukraine Fact Sheet

SEVA'S WORK AT A GLANCE: In country since 2017 | Partner: 1

Country Overview

- » Ukraine spans 233,062 square miles
- » Population: 44.2 million people
- » 2019 Human Development Index Ranking: 88 of 189 countries¹

Scope of Vision Needs

- » 0.26% of Ukraine's population is blind (217K), as compared to 0.15% in the United States
- » 1.80% of the population has moderate to severe vision impairment or MSVI (1.4M), as compared to 1.25% in the United States²
- » 0.60% of global blindness
- » 0.65% of global MSVI

Nationwide Eye Care Response

- » Ukraine's CSR was 1,222 surgeries per million in 2006³, as compared to the US CSR of 6,353
- » 68 ophthalmologists per million people in Ukraine as of 2010 (US = 60 per million people)
- » No data available for AOPs and optometrists per million people

Seva's Approach in Ukraine

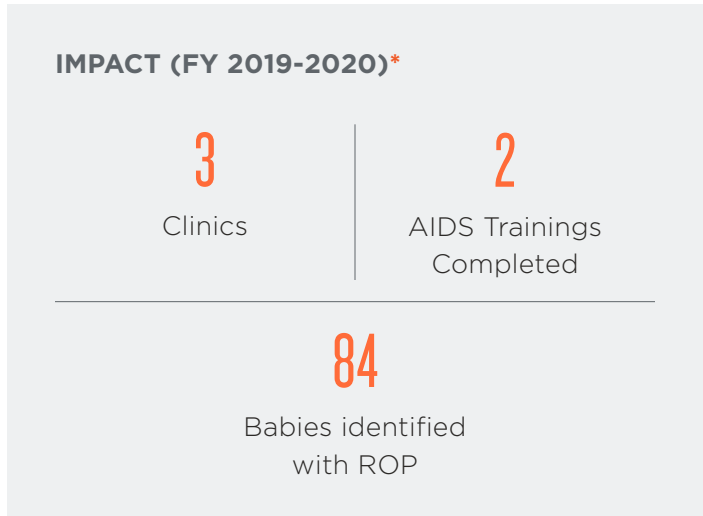

Ukraine has the second largest HIV/AIDS epidemic in Eastern Europe and Central Asia. In 2019, 250,000 people were living with HIV in Ukraine, up from 120,000 in 2010. With HIV infection comes the possibility of CMV retinitis, which can cause blindness if left untreated. Many people living with HIV/AIDS risk going blind from CMV retinitis because of the stigma that surrounds the disease and the lack of access to doctors with appropriate eye care training.

Seva is addressing this issue by providing training to AIDS clinicians and ophthalmologists on how to diagnose and treat CMV retinitis. In July 2017, Seva's AIDS Eye Initiative Medical Director, Dr. David Heiden trained six ophthalmologists, providing in-depth and hands-on lessons in diagnosing and treating CMV retinitis. By the end of the session, participating ophthalmologists indicated they had a high level of confidence in their ability to identify this debilitating condition.

Seva also began working with Eye Samaritan International to mitigate and prevent Retinopathy of Prematurity, the leading cause of blindness for babies in Ukraine. In partnership with Seva, ESI is working to create a center of excellence to treat ROP at the Filatov Institute of Eye Diseases and Tissue Therapy in Odessa, Ukraine by augmenting an established institution with additional equipment, training, financial support and access to specialized expertise.

Impact of COVID-19 in Ukraine

COVID-19 cases continue to increase across the country. Services have been limited depending on government recommendations and lockdowns but overall, eye care services have been able to resume and continue to be provided at the clinics. Seva's partner in Odessa saw an initial decrease in the number of babies screened in light of the COVID-19 pandemic but these numbers are beginning to return to expected levels as safety protocols are developed and rolled out.
